

# Humanities

## Factsheet

**HENLEY**  
HIGH SCHOOL

The Humanities help us to understand our heritage and where we currently stand in our world. We investigate where our ideas, languages, laws and many other aspects of our lives came from and are heading.

We develop open minds and learn to appreciate different cultures, ideologies and practices. Students learn how to propagate ideas to sustain an economic and environmentally conscious future, whilst analysing the effects of past and present decision making.

Our Humanities programs give students agency to choose areas of study that they are interested in. We offer modern and ancient options, current social and cultural areas of study and research-based field studies.

Students are able to immerse themselves in hands-on practical activities that give them an authentic experience, whether it be geography-based field experiences or social actions where students see their impact.

We are leaders in the Business Innovation in Education field. As the pilot school for the Shark Tank program in Year 11, we have set the standard for all schools undertaking this program. The students enjoy authentic opportunities with a great blend of business academia and real-world approaches to learning and immersing students in entrepreneurship.

### Subjects

- ✓ Modern History
